## Advice to Authors

The illustrations that will appear in your contribution will be shown to best advantage if you follow the brief set of instructions below. Please read carefully. Thank you.

The Publisher

### Preparation of Line Drawings

Illustration copy should be prepared to fit the format of the column or printed page (print area) so that 1:1 reproduction is possible. In case reduction is absolutely necessary, please state the alternative scale desired.

The publisher reserves the right to reduce or enlarge illustrations.

Drawings are to be twice the final size and executed in indelible black ink.

Important points to note: thickness of lines, size of inscriptions, size of measuring points, adequate spacing of shaded and dotted areas.

Words should be in upper- and lower-case characters, not capitals.

The following are optimal sizes as they finally appear in the journal:

Capital letters and numbers: 2 mm

Lower-case letters: 1.6 mm.

①

samples 1 to 5 show  
the original size and  
after 50% reduction

**Selection of Illustration Material for Halftones** (photographs, micrographs, X-rays, instrument traces etc.).

Photographs should be sharp, well-contrasted glossy prints of the original negative, trimmed at right angles. Halftone illustrations should be prepared to fit the format of the printed page (print area) so that 1:1 reproduction is possible. In case reduction is absolutely necessary, please state the alternative scale desired. The publisher reserves the right to reduce or enlarge illustrations.

Mark or crop marginal portions which are not required (at right angles, please).

Please see that illustrations which are to appear together are mounted accordingly as plates and that they correspond in size. Also they should not exceed the print area of the page, including room for the legend.

With X-rays, please indicate the significant parts on the back of the copy, or on an overlay.

Inscriptions, marks and scale lines should preferably be drawn neatly in black ink in an appropriate size on the face of the illustrations.

Inscriptions should be about 3 mm high. Where Letraset is used, please handle it carefully and protect the photographs with an overlay.

TEIL I UND II

# Drug Addiction

Editor: W.R. Martin

This two-volume work addresses the problem of drug addiction from several points of view which are quite unique and different from other areas of pharmacology. In two individual parts all major scientific, medical and social issues are treated that bear on problems of drug abuse. The abuse of narcotic analgesics, weak analgesics, amphetamines, barbiturates, alcohol, LSD-like hallucinogens and marijuana is discussed. Attempts are made to identify the major social issues that have given rise to concern about drug abuse. Further, attention has been given to the chemotherapy and psychotherapy of narcotic addiction. The basic modes of actions of drugs of abuse are reviewed. Methods for identifying drugs with abuse potential are also described and there are discussions of the principles underlying these methods and their validity. There are discussions of the pathophysiology and psychopathology of addictive processes. Finally, the literature concerning the modes and sites of actions of narcotic analgesics, weak analgesics, barbiturates, alcohol, amphetamines and LSD-like hallucinogens is reviewed in detail in man and in animals with the end of understanding why these drugs are abused, what pathologic changes their abuse causes, and how a rational attack on treating these diseases can be formulated.

A 2

## Drug Addiction I

Morphine, Sedative-Hypnotic and Alcohol Dependence

With contributions by H.T. Conrad, H.F. Fraser,  
C.W. Gorodetzky, D.R. Jasinski, P. Kielholz, L. Ladewig,  
W.R. Martin, N.K. Mello, J.H. Mendelson, J.W. Sloan,  
C.M. Smith

1977. 24 figures. XXIII, 748 pages  
Cloth DM 225,-; US \$ 112.50  
ISBN 3-540-08170-4

**Contents:** Problems of Drug Dependence.—General Problems of Drug Abuse and Drug Dependence.—Morphine Dependence.—Neuropharmacology and Neurochemistry of Subjective Effects, Analgesia, Tolerance and Dependence Produced by Narcotic Analgesics.—Assessment of the Abuse Potential of Narcotic Analgesics in Animals.—Assessment of the Abuse Potentiality of Morphine Like Drugs (Methods Used in Man).—Psychiatric Treatment of Narcotic Addiction.—Chemotherapy of Narcotic Addiction.—Detection of Drugs of Abuse in Biological Fluids.—Sedative-Hypnotics and Alcohol Dependence.—The Pharmacology of Sedative-Hypnotics, Alcohol, and Anesthetics: Sites and Mechanisms of Action.—The Assessment of the Abuse Potentiality of Sedative-Hypnotics. (Depressants) (Methods Used in Animals and Man).—Clinical Aspects of Alcohol Dependence.—Abuse of Non-Narcotic Analgesics.

## Drug Addiction II

Amphetamine, Psychotogen and Marijuana Dependence

With contributions by E. Änggård, W.L. Dewey, J.D. Griffith, L.-M. Gunne, L.S. Harris, T. Lewander, W.R. Martin, R.K. Razdan, J.W. Sloan

1977. 15 figures, 24 tables. XV, 501 pages  
Cloth DM 190,-; US \$ 95.00  
ISBN 3-540-08334-0

**Contents:** Amphetamine and Psychotogen Dependence.—General Pharmacology of Amphetamine-Like Drugs.—Pharmacokinetics and Metabolism.—Effects of Amphetamine in Animals.—Effects of Amphetamine in Humans.—Amphetamine Dependence; Clinical Features.—Pharmacology and Classification of LSD-like Hallucinogens.—Marijuana Dependence.—Cannabis. Its Chemistry, Pharmacology, and Toxicology.—Author index.—Subject index.
